 DIRECT RADIATION UV-C GERMICIDAL LAMP FOR INDUSTRIAL USE

HOW DOES THE DIRECT RADIATION UV-C GERMICIDAL LAMP FOR INDUSTRIAL USE WORK?

Direct radiation germicidal lamps type NBV IP65 are designed to prevent primary and secondary infections in the food, pharmaceutical and cosmetic industries, warehouses, everywhere the production process takes place. Direct radiation germicidal lamps applied in the rooms where airborne pathogenic microorganisms (pathogens) lives, significantly reduces the probability of spread the infection by air. Raising the level of microbiological purity of the air and surface helps to destroy and reduce impact of existing outbreaks of pathogens.
